

**Nikolay Nikolov
Emanuil Chankov**

**STRENGTH
OF MATERIALS**

HANDBOOK

**·Avangard Prima·
Sofia, 2013**

This handbook is designated for foreign and Bulgarian students from Technical University of Sofia who attend the English language courses in Strength of Materials. It can be a beneficial appliance in other engineering courses. The handbook can be also used by students from other universities as well as by engineers for practical calculations.

CONTENTS:

List of symbols.....	4
----------------------	---

SECTIONS

Moments of inertia.....	5
Definitions.....	5
Parallel axis theorem.....	5
Moments of inertia at rotation of the coordinate system.....	5
Geometrical properties of simple planar shapes.....	6
<u>Geometrical properties of standard shapes:</u>	
I-beams IPE in accordance with DIN 1025-5:1994; Euronorm 19-57 etc.....	9
Flange beams HE in accordance with DIN 1025-2:1995; Euronorm 53-62 etc.....	11
Beam IPN in accordance with DIN 1025-1:2009.....	14
Channels UPN in accordance with DIN 1026-1:2009.....	15
Parallel flange channels UPE in accordance with DIN 1026-2:2002-10.....	16
Equal leg angels EN 10056-1:1999.....	17
Unequal leg angels EN 10056-1:1999.....	20
Square hollow sections EN 10210-2:2006.....	22
Rectangular hollow sections EN 10210-2:2006.....	25
Circular hollow sections EN 10210-2:2006.....	28

MATERIALS

Designation of material properties.....	31
Mechanical properties of common materials – metals.....	32
Mechanical properties of common materials – non-metals.....	33
<u>Standard mechanical properties of some steels:</u>	
EN 10025:2005 Structural steel.....	34
EN 10087:2000 Free-cutting steels.....	35
EN 10088-3:2005 Stainless steels.....	36
EN 10277-2:2008 Bright steel products.....	37

APPENDIX

Some frequently used formulas in Strength of Materials.....	39
Unit conversion.....	39
